Task Manager

A powerful management tool

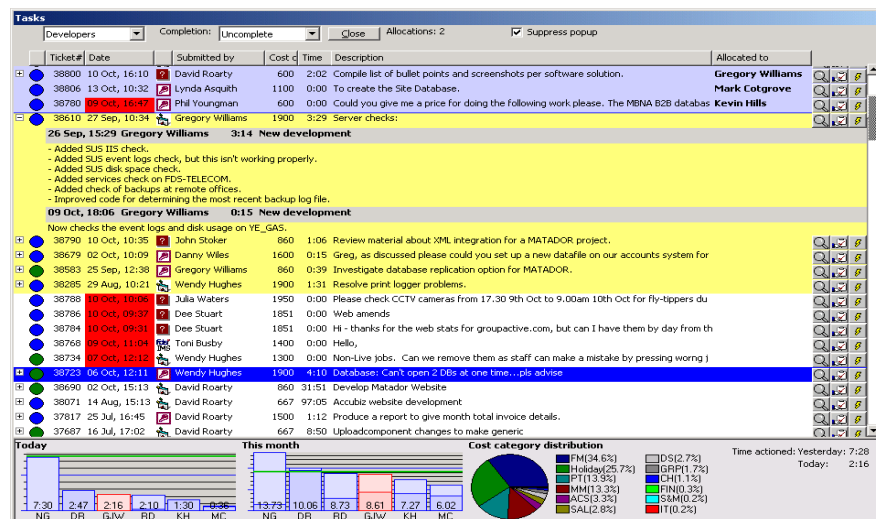

Task Manager is a client server application specifically designed for small to medium companies who have service departments that need to track requests or tasks throughout the whole process from request to conclusion

Benefits Include:

- Fast communication of client needs
- Management reporting on progress
- Manages allocation to cost centres

Task Manager is special because:

- It is a ready built system – so can be customised very quickly
- It is constantly being developed & maintained – so clients will benefit from continuous improvement

(Task Manager main administration screen)

Task Manager capabilities:

- Submit timed requests by person, category, cost centre, and priority.
- Windows and web-based client user interface.
- Add multiple actions per task, each of which is optionally chargeable.
- User interface helps with prioritisation of tasks.
- Tasks can have more than one person working on them simultaneously
- Automatic generation of tickets
